 **ECLISSE**
LOOKING FURTHER

**Real changes are born
of a willingness
to look further.**

*"I have always wanted to create a
pocket door system which is easy
to install and will last forever.*

*I am inspired by the idea of
constantly improving the
performance of this product,
because I want to satisfy everyone
who sells it, installs it and uses it.*

*This is what drives me and enables
me to always Look Further."*

A handwritten signature in black ink that reads 'Luigi De Faveri'.

Within the wall	6
Form and matter	8
Surfaces to decorate	20
Metals and transparencies	26
The value of what you do not see	40
Create your own combination	42

Our aim is to develop and manufacture sliding pocket door systems and flush door frames that are easy to install, functionally flawless and easy to maintain. We want to be the answer to every functional and space requirement, with practical and design-oriented solutions.

Maximum freedom to customising rooms, integrating products that are different in functionality but consistent in style. All of this is the ECLISSE proposal of flush-to-wall solutions to close, separate and contain. Create surprising combinations by matching frames, decorative profiles, doors, handles and skirting boards in different colours. Design becomes absolute by coordinating each individual element.

WITHIN THE WALL

It is not easy to show something that is designed to be hidden, to give value to an element that is made to disappear, to make people perceive how much technology and innovation there is behind a system that you do not see. We know how much the smallest detail can contribute to the final result. That is why we continue to research, we innovate, we anticipate the future. ECLISSE offers a complete collection of closing systems to close any type of compartment or opening and make it flush to the wall: from pocket and swing doors, to access panels and technical hatches, to skirting boards. The lowest common denominator is the perfect continuity with the wall, which makes openings and passageways less visible, as well as walk-in wardrobes, pantries and storerooms.

FORM AND MATTER

All the products in the flush-to-wall line blend perfectly into the environment, each one being customisable and perfectly combinable with the others thanks to a shared construction technology. The profiles of the pocket door counterframes are treated with a special resin coating (ECLISSE patent) that ensures perfect adhesion of the finishing material and absolute homogeneity of the paint, warding off the risk of flaking over time. Combined with a primer-coated door panel, the opening system is ready to be painted in the desired colour, or covered with wallpaper, for a camouflage effect that seamlessly blends doors and walls. A new way of imagining and interpreting the wall as an uninterrupted, homogeneous surface with a single finish that envelops the room from floor to ceiling.

openings: ECLISSE Syntesis Line
door panel: wooden, primer-coated
handle: Cassiopea, square, satin chrome

baseboard: ECLISSE Syntesis Baseboard
finish: wooden, primer-coated
plus: LED backlighting (LED strip not supplied)

Same solutions, opposite styles

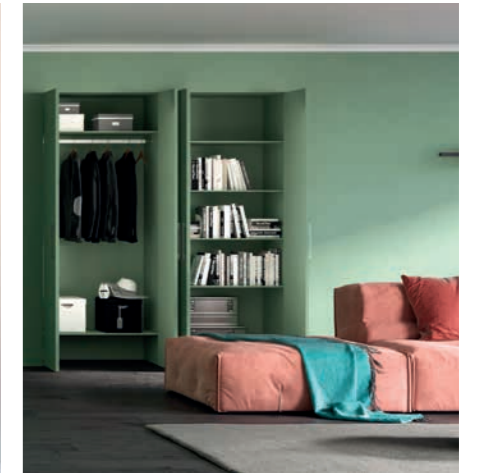

The character of a room comes first and foremost from its colours and finishes, and the same space can dress up very different personalities. The transparencies of glass can welcome you in a refined and sophisticated ambience, while a single contrasting finish can displace the viewer with a bold result. A completely different effect, in the very same room, can be given by the neutral and restful tones of warm wood.

opening: ECLISSE 40
finish: primer-coated, paintable
door panel: wooden, primer-coated
handle: 40+one, satin chrome

baseboard: ECLISSE Delta
finish: primer-coated, paintable

opening: ECLISSE Syntesis Areo - modular doors
door panel: white melamine, paintable
handle: pull handle, satin chrome

BELOW
Detail of ECLISSE Delta, the sloping skirting board, and its faceted end piece, designed to connect with the flared profiles of the ECLISSE 40 frame.

openings: ECLISSE Syntesis Line Battente
door panel: wooden, primer-coated
handle: Pure, satin chrome

No wasted corner

The ECLISSE Syntesis Areo frame can be easily fixed to the wall to close an existing niche and transform it into a storage space. Even if the walls are not perfectly straight, the frame can be adjusted on different sides thanks to a perimeter cover that compensates for any gaps, concealing them from view.

opening: ECLISSE Syntesis Areo, bifold door
door panel: white melamine, paintable
accessory: cover for existing niches

Invisible space

Wardrobes, cupboards, shoe racks, laundry niches, equipped under-stair cupboards, technical compartments and switchboards. ECLISSE flush access panels solve every functional requirement for large and small openings, whether they are technical cabinets to be accessed when needed or everyday storage units to be opened and closed comfortably.

opening: ECLISSE Syntesis Tech, flap panel
door panel: white melamine, paintable

openings: ECLISSE Syntesis Areo, inclined header
door panel: white melamine, paintable
handle: pull handle, round, brushed nickel

opening: ECLISSE Syntesis Areo, modular doors
door panel: white melamine, paintable
accessory: shelf fittings

opening: ECLISSE Syntesis Areo, bifold door
door panel: white melamine, paintable
handle: pull handle, round, brushed nickel

SURFACES TO DECORATE

ECLISSE flush-to-wall products, such as door frames and wall panels, are designed in every detail to be invisible and become walls in their own right.

The primer-coated profiles of the hinged door frames, combined with a primed door panel, ensure that the whole surface of the wall to be painted or wallpapered is ready to be worked on, with no need for additional steps or treatments, for a homogeneous application without visible joints or defects.

The versatility of these products makes it possible to harmonise openings and spaces with their surroundings, adding style and character in a creative and original way.

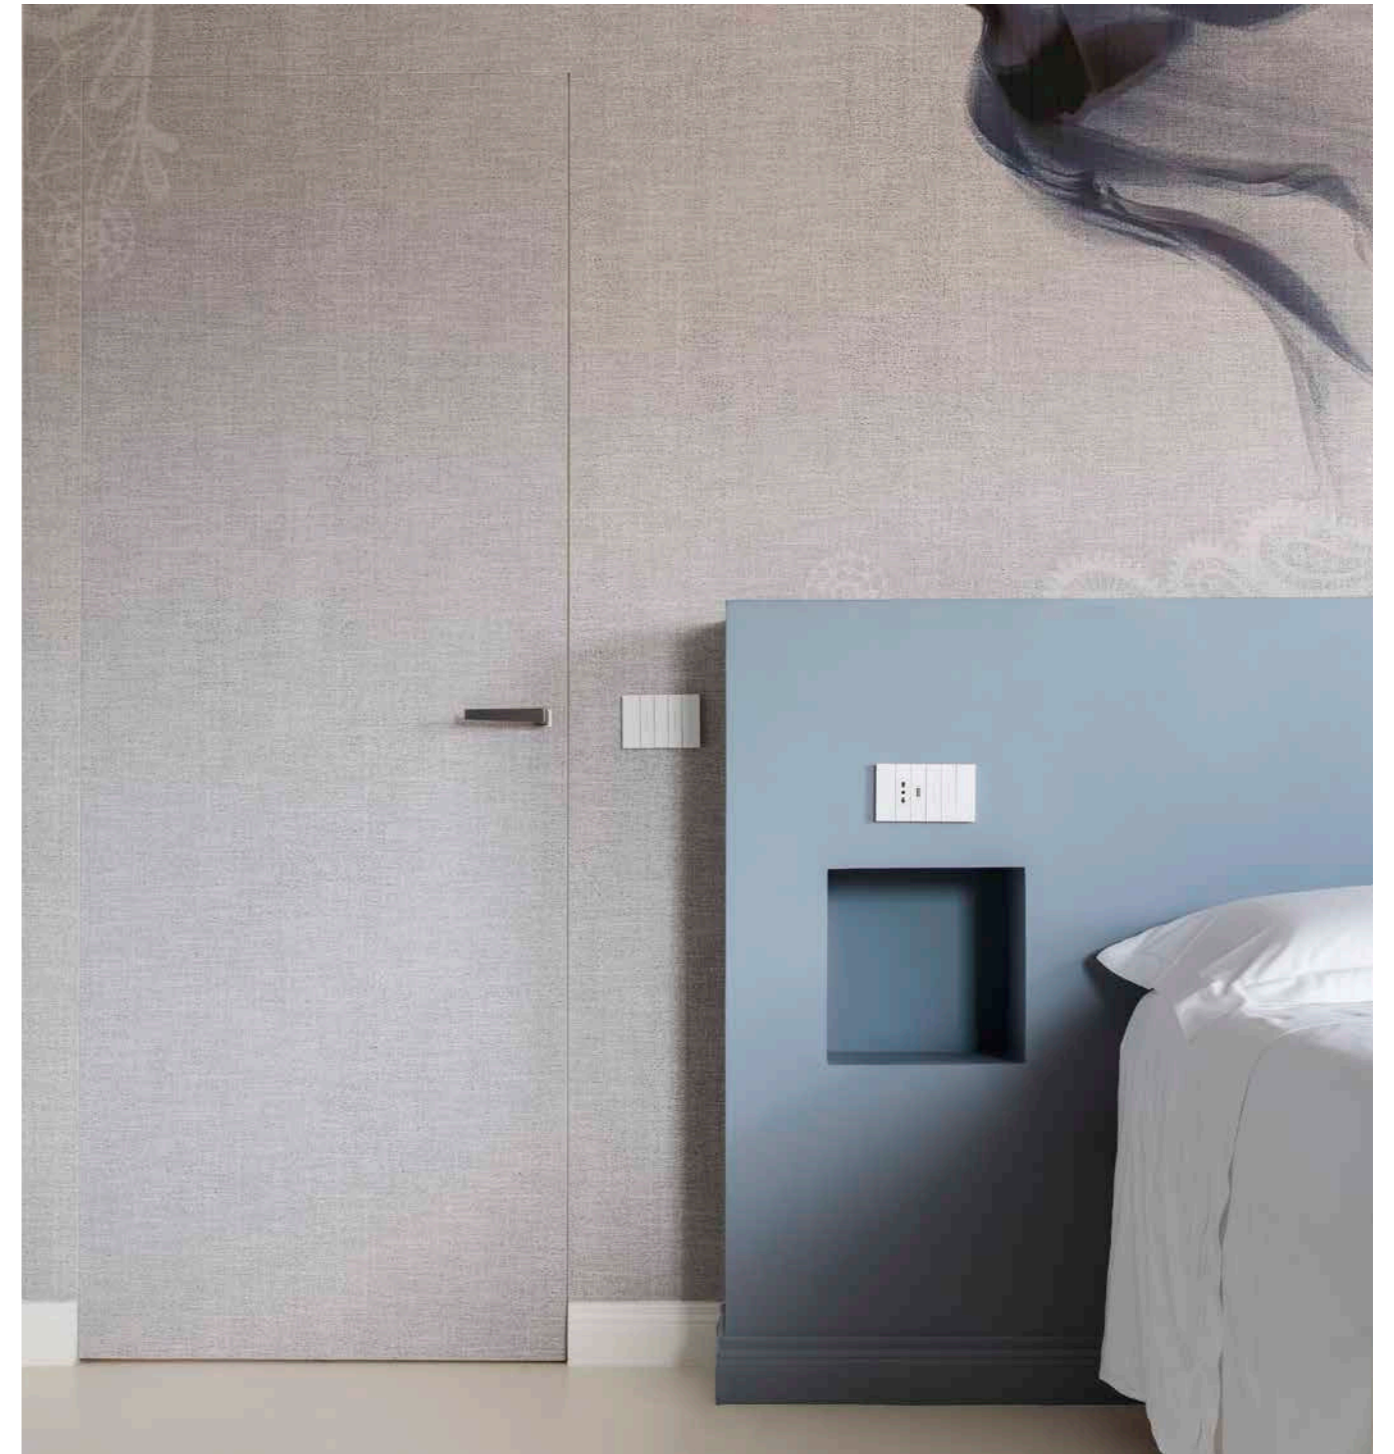

openings: ECLISSE Syntesis Line Battente
door panel: wooden, primer-coated
handle: Pure, black

A different angle

The ECLISSE Syntesis Line Battente flush door system can also be realised with a sloping upper edge. With or without frame header, it is the ideal solution for sloping ceilings, attics and under-stair storerooms.

opening: ECLISSE Syntesis Line Battente with inclined upper edge
door panel: wooden, primer-coated
handle: Pure, satin chrome

opening: ECLISSE Syntesis Line Battente
door panel: wooden, primer-coated
handle: 40+one, satin chrome

opening: ECLISSE Syntesis Line Battente
door panel: wooden, primer-coated

The folding door

A folding sliding door allows the same wide opening as two traditional hinged doors, but with moving footprint of a single door and the convenience of a single action when opening and closing.

In the double door version, it can conceal maxi compartments that hide wall cupboards, home office workstations or even fully equipped kitchens, always offering a free and conveniently accessible compartment.

opening: ECLISSE Syntesis Areo, bifold door
door panel: white melamine, coatable with wallpaper
handle: lever handle, brushed nickel

METALS AND TRANSPARENCIES

Glass is an elegant and striking material that furnishes a space and separates lightly, without cluttering. It is an element that, when it comes to doors, allows for continuous openings with great visual and aesthetic impact.

The use of glass allows you to maximise the benefits of light, making the divisions between rooms more fluid and dynamic. Or you can put together glass and aluminium, a combination that is a protagonist in modern design, giving interiors a sophisticated and original aura.

To create coordinated environments, the aluminium structure of the door panel is available in the same finish for all types of openings, pocket and hinged. No exception is the combination with ECLISSE 40, the exclusive hinged door frame with 40-degree flared profiles, whose finishes are the same as those available for the glass door aluminium frames.

opening: ECLISSE Syntesis Line Double
door panel: glass and aluminium, single-glazed
glass finish: transparent bronze
aluminium finish: Tobacco
handle: standard

glass finish: transparent smoked
aluminium finish: Tobacco
handle: 40+one, Tobacco

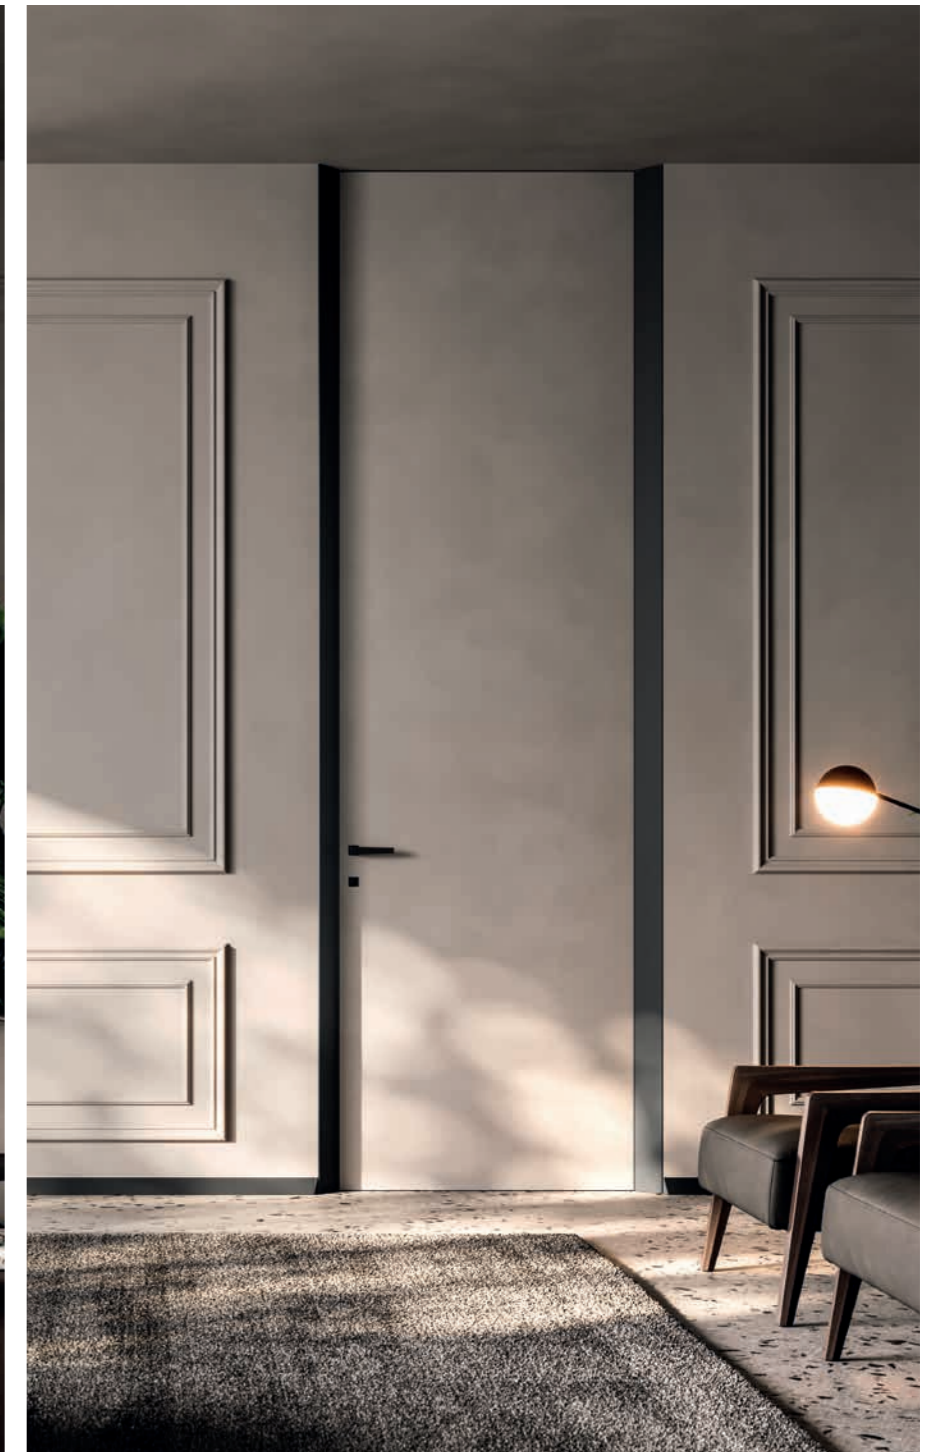

Intersections of surfaces. Plays of light and shadow.

The splayed profiles of the innovative ECLISSE 40 door frame interpret the doorway in an unprecedented fashion. Reminiscent of the past but with a contemporary flair, they allow to play with inclinations and transform the door into a decorative element, from a functional tool to a protagonist of the scene. All this with the elegant discretion of a flush-to-wall door on the opposite side.

One room, one finish

The ECLISSE painted products line allows you to have sliding and hinged doors, frames and decorative profiles, handles and skirting boards coordinated by the same finish, for a consistent result and a unique aesthetic impact. Part of this line, ECLISSE Mimesi is a special aluminium profile that allows a pocket door to be coordinated with an ECLISSE 40 frame installed in the same room. Different functionalities but one sophisticated style.

THE VALUE OF WHAT YOU DO NOT SEE

Intelligent details for those who choose and use our products

We designed our pocket and swing systems for the people who open and close doors in their everyday life, even in a rush and without paying too much attention. Because ECLISSE products are made to last: today, tomorrow, always.

Uncompromising quality. We registered over 40 exclusive patents to ensure professional installation and long-lasting daily use, as well as a series of laboratory tests that certify the value of our intuitions.

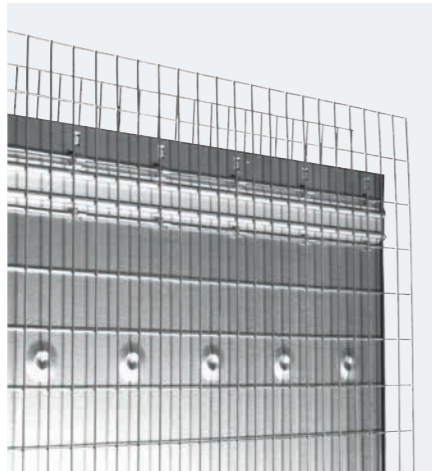

Extractable track

The component of the counterframe subject to wear (the track itself and the sliding carriages) can be replaced with no need for masonry work.

Protruding knurled mesh

Connecting the pocket with the wall, it allows the two elements to become one, avoiding cracks or the need for additional mesh. The knurling also facilitates the fixing of the plaster.

Self-centering door guide

Quick and easy to fit to the pocket door with no holes to drill, it allows the door to always slide smoothly in the centre of the case. Available for wooden doors and glass doors.

Alignment bar

It provides a solid joint between the bottom of the pocket and the stop post during the installation, ensuring that the door slides properly and closes tightly.

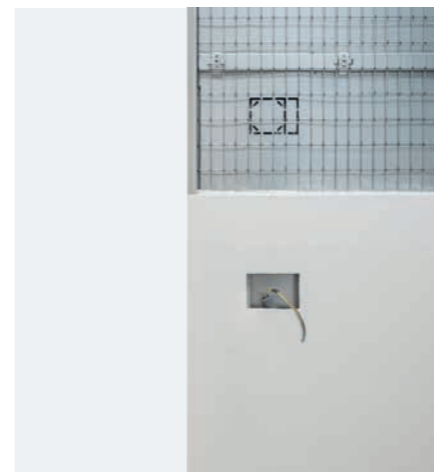

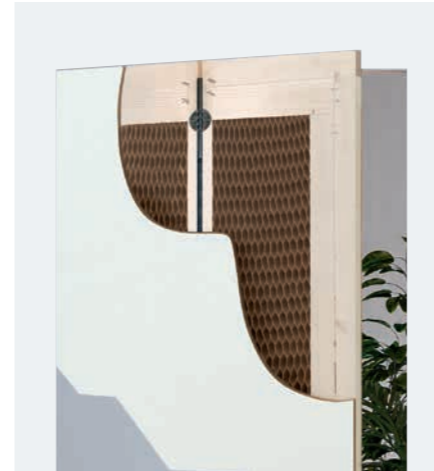

Resin-coated profiles

They just need a thin layer of plaster or putty to be put along the perimeter of the doorway, reducing the drying time and therefore the installation time.

Hollow-core doors

ECLISSE sliding and hinged doors consist of a honeycomb core with double solid wood perimeter to increase rigidity while reducing weight.

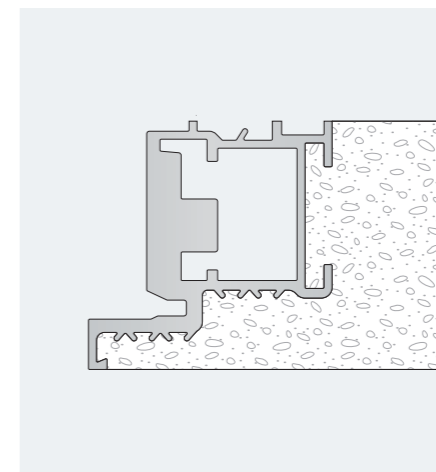

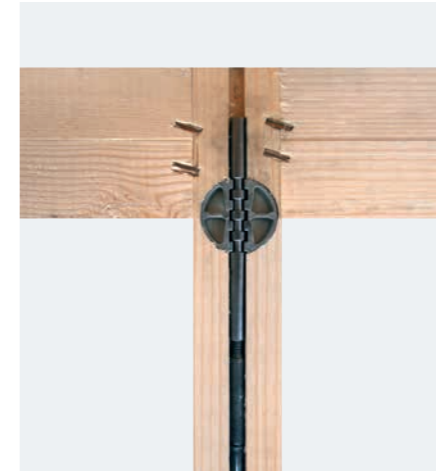

Luce system

Patented technology, this system allows for the installation of light fittings, thermostats, switches and telephone wiring directly on the counterframe. Operational and space-saving.

Tensioning rod

Door panels are fitted as standard with an internal tensioning rod, a special device that can be adjusted at any time to keep the door panel in constant tension, preventing it from buckling and ensuring flatness with the wall.

Zero cracks

The profiles of the frames are designed to allow total integration of the frame into the wall and prevent the formation of cracks.

3 adjustable hinges

Adjustable hinges in height, width and depth for a perfect calibration of the slightest perimeter gaps.
